ARTISAN SOUL, INNOVATIVE PERSONALITY.

We are an international group with a presence on every continent, an extensive network of companies and an evolved industrial organisation. But first and foremost, we are a group of people with an artisan soul. We are united by our passion for perfection in every detail and by our innate determination to evolve. We value the close relationship that we have with our customers and offer the retail sector the custom creations it needs.

We look to the future with the understanding that growth means responsibility. That is why we design products for the circular economy that are up to 96% recyclable. Our design system has become so much more sustainable over the years that we have succeeded in reducing the consumption needed to produce each refrigerated display by 46%.

ASSISTANCE AND SERVICES FOR ALL NEEDS.

We offer our customers a range of professional after-sales services to optimise the performance of refrigerated displays and islands, commercial refrigerators and refrigeration systems and to keep them running at peak efficiency for years to come.

Thanks to advanced technology and specialist technical personnel, we can perform maintenance at any time, even while your store is closed.

And to respond rapidly and effectively to any requirement, we offer a worldwide technical assistance service along with more specific services for Italy.

GLOBAL TECHNICAL ASSISTANCE

- After-sales assistance
- Spares and instructions
- UE conformity

TECHNICAL ASSISTANCE IN ITALY

- On-call technical assistance
- Preventive assistance
- Full service with remot management
- 24H monitoring

SERVICES IN ITALY

- Energy consulting
- Retrofit, Revamping, Relamping
- Sanitisation
- Extra Cold

TECHNOLOGIES

BEMS
SUPERVISOR

We monitor and control all your store's energy consumption.

If you are looking for a single partner to manage the power loads of your refrigeration systems, air conditioning and lighting, you can trust us.

ECO RING
SYSTEM

The solution that reduces the use of refrigerant gas, for a more sustainable world.

Arneg's revolutionary Eco Ring is a refrigeration solution that significantly reduces impact on the environment and guarantees improved safety too, thanks to the use of a smaller quantity of natural gas to cool even large refrigerated displays in plug-in mode.

AIR
SYSTEM

Optimised food preservation with minimum consumption.

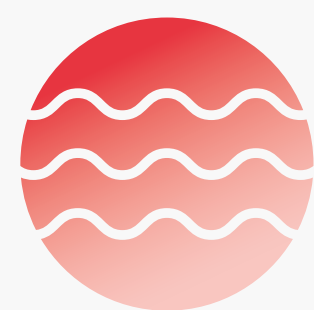

Arneg's exclusive, patented Air System concentrates air circulation in special dynamic air blades to keep food products at a constant temperature and optimise the efficiency of refrigerated displays.

O-FRESH SYSTEM

The natural way to sanitise and refrigerate for longer.

Arneg O-Fresh System is the only patented, professional system that uses ozone to ensure continuous sanitisation and extend food preservation times in ventilated refrigerated displays.

TCOM SYSTEM

The revolutionary medium-wave technology that keeps food hot in complete safety.

TCOM System is patented Arneg technology that enhances the quality of hot deli foods safely and efficiently. Thanks to a new medium-wave infrared lamp heating system, TCOM maintains a constant and uniform core temperature of 65° without drying food or spoiling its nutritional properties.

HOT&COLD SYSTEM

This exclusive patented technology combines hot and cold sections in the same cabinet with no need for heating elements.

Hot & Cold technology recovers thermal energy from the high-pressure side of the transcritical CO2 cycle and uses it to heat products in the upper section of the display to a core temperature of 65°C or above.
